Lumapower Innovative Flashlight

User Manual

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance instruction in the literature

Welcome to Lumapower

Please take a moment to register your product on our Web site at <http://www.Lumapower.com>. It enables us to keep you posted on our latest advancements, and helps us to better understand our customers and build products that meet their needs and Expectations.

This product has been designed and manufactured to the highest quality standards. However, if something does go wrong with this product, Lumapower and its national distributors warrant free of charge labour and replacement parts in any country served by an official distributor.

Unpacking: Check the product carefully. If it has been damaged in transit, report the damage immediately by calling your dealer and/or the shipping company that delivered it.

Read Instructions. All the safety and operating instructions should be read before the product is operated.

Follow Instructions. All operating and use instructions should be followed.

Replacement Parts. When replacement parts are required, be sure the replacement parts have the same characteristics as the original part. Unauthorized substitutions may cause damage to the unit.

Introduction

Lumapower MVP supports input voltage from 6.5V to 10V. MVP is fitted with pure white LED module driven by current regulation circuitry to achieve a consistent level of light output for the useable life of the batteries. With Over discharge protection at 4.8V and current control protection to enhance battery life

Combination	Battery Type	Pcs
1	Rechargeable 16340 (3.7V)	2
2	Rechargeable 17650 (3.7V)	2
3	Rechargeable 17670 (3.7V)	2
4	Rechargeable 18650 (3.7V)	2

1. Bezel assembly
2. Reflectors, LED engine
3. SideKick module, housing
4. Primary battery housing
5. Secondary battery housing
6. Tailswitch cover
7. Lanyard ring
8. Power switch assembly

MVP features a forward clicky switch and multi-level SideKick control circuit with memory functions.

Half-press the tail switch to power on MVP momentary, full press to lock it for constant on. Cycle press the SideKick to select output mode.

Convertible Design

MVP can be operate with 2x16340 , (with Secondary battery tube removed).

Reflectors/LED engine module can be easily upgrade.

Lanyard ring is removable.

SideKick output control and Memory

Press to cycle the output from High, Medium and Low and High-speed Tactical Strobe. SideKick module works on Power ON or OFF which remains the selected output with your next start.

Battery Installation

Unscrew the tail or battery tube and insert new batteries with positive ends towards LED assembly. Restore hand tighten. Depress tail cap pushbutton switch to test.

Note: It would not light if battery is inserted in wrong direction.

Damage will occur with wrong battery insertion.

CAUTION: MVP flashlights are high-output lighting devices. Due to possible eye injury, **DO NOT look directly into the reflector when the light is switched on.** Safety is your responsibility, too.

External surface temperature will rise during prolonged operation; this is a normal operating phenomenon.

Battery Replacement

If there is significant decrease in brightness of light output you should replace the battery. Unscrew the LED-engine and remove the old battery. Insert a new battery as mentioned in **Battery Installation Guide**

WARNING: Lithium batteries can explode or cause burns if disassembled, shorted, recharged, exposed to water, fire, or high temperatures. Do not place loose batteries in a pocket, purse or other container containing metal objects or store with hazardous or combustible materials. Store in cool, dry, ventilated area. Follow applicable laws and regulations for disposal.

Never use mixed-battery type. Replace all battery with the same kind.

Input voltage limited to 10V, never use 4x CR123A or 4 x 16340 which may cause circuit damage.

Power ON MVP at High-out position unattended over 30 minutes may cause Overheat.

Maintenance

Clean and lubricate threads with a clean cloth and apply thin coat of silicon-based lubricant to rubber O-rings. **Note:** Do not use petroleum-based lubrication on O-rings. After prolonged exposure to moisture, the bezel and batteries should be removed, inspected, and dried if necessary.

WARNING: Lumapower reflector is made with high precision process. Do not touch or clean the reflecting surface using any cloth which may cause damage to the surface material affecting the illuminating performance.

Non-use Periods.

If MVP is left unused for long period, the installed battery should be removed from the unit.

Output & Runtime

Accurately specifying light output (lumens) and runtime is complicated for LED flashlights. Installed batteries and operating temperature are the main factors affecting the light output and runtime. Lumapower doesn't guarantee its products can reach the specification under the using condition of users.

Specification

LED : Cree XR-E Q5 x 3

Reflector : SMO type

Output : 50 Lumens to 700 Lumens

Runtime : 90 minutes at High, 2500 minutes at Low (2x18650 @2600mAH)

Input Voltage : 6.5V to 12.5V

Batteries : rechargeable Li-ion x 2 (16340,18650...)

Length : 236mm/171mm

Bezel Diameter : 60mm

Body Diameter : 28mm

Tail cap Diameter : 32mm

Reflector Diameter : 20mm

Weight : 383g (Full size without battery installed)

Material : T7 aircraft aluminum with Type III HA

Body color : Black

Accessories : spare o-rings (for battery tube)

Specifications: All product specifications/features are subject to change without notification.
